

I started by creating the directory structure you see here:

Afspraken	Merge branch 'main' of https://gitlab.fdmci.hva.nl/semester-3-hbo-ict/onderwijs/student-proj...	1 week ago
Diagrams	classDiagram3.0 (na peer review Jamie)	1 day ago
Onderzoeken	VersionOne	1 week ago
Overige	MovedUseCaseDiagram	6 days ago
Persona's	persona edited name	2 weeks ago
Retro's	Merge remote-tracking branch 'origin/main'	2 weeks ago
Reviews	kleine aanpassing voor extra duidelijkheid aan sprint 1 review documentatie	2 weeks ago
Wireframes	paper version of low fidelity uploaded	1 week ago
foto's	Gave logo a better file name	1 week ago
index.md	Project-bestanden van Elections gekopieerd	3 weeks ago
starting.md	Project-bestanden van Elections gekopieerd	3 weeks ago

This is how we started organizing our directories to keep everything neatly structured.

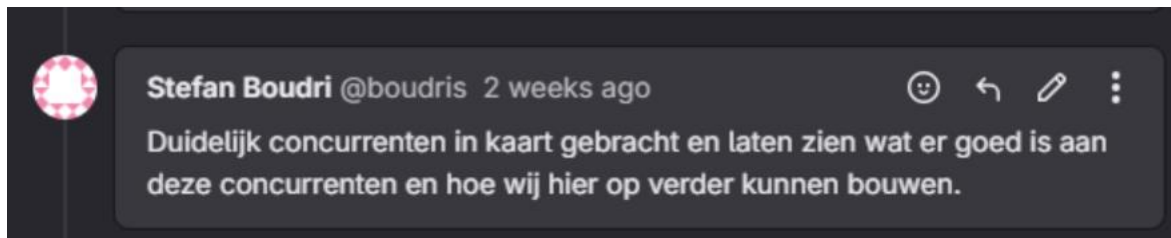

Then I made my first version of the market research:

https://gitlab.fdmci.hva.nl/semester-3-hbo-ict/onderwijs/student-projecten/2025-2026/out-s-t-se/suuzameebaa24/-/blob/main/docs/Onderzoeken/MarktonderzoekKOF.md?ref_type=heads

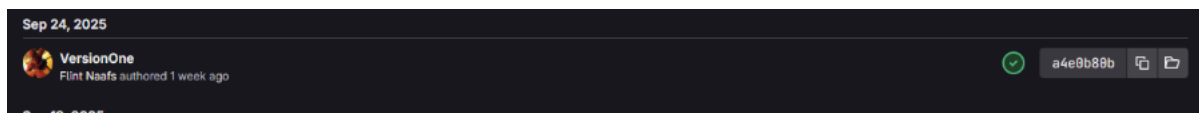

I asked for a peer review:

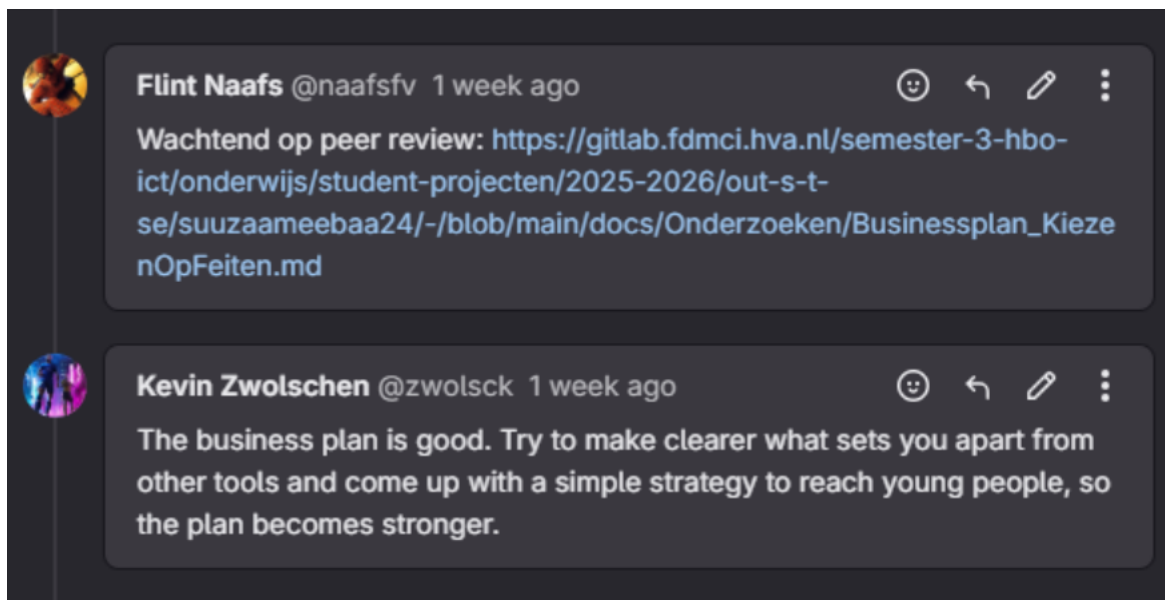

This was the peer review I received, so I didn't need to change anything.

After the market research, it made sense to create a business plan, so I did:

Again, I asked for a peer review and changed things accordingly:

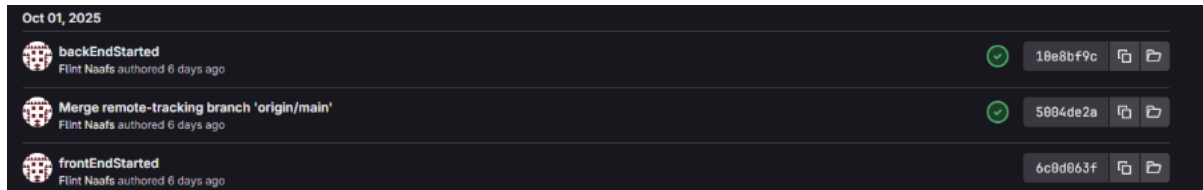

Final version: https://gitlab.fdmci.hva.nl/semester-3-hbo-ict/onderwijs/student-projecten/2025-2026/out-s-t-se/suuzameebaa24/-/blob/main/docs/Onderzoeken/Businessplan_KiezenOpFeiten.md?ref_type=heads

Since we now had a lot of information about the project, I could finish the Business Model Canvas:

https://gitlab.fdmci.hva.nl/semester-3-hbo-ict/onderwijs/student-projecten/2025-2026/out-s-t-se/suuzameebaa24/-/blob/main/docs/Overige/Business_Model_Canvas.svg?ref_type=heads

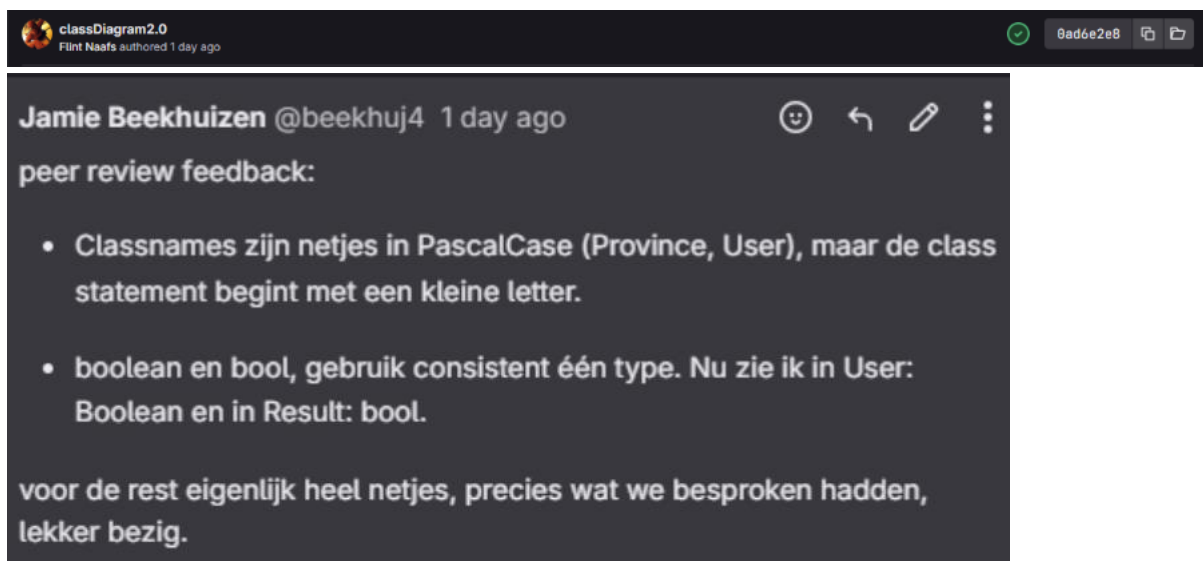

Then we started with the initialization of the front-end and back-end with our entire team—not to start coding, but just to set everything up:

Last but not least, I started creating a class diagram so we know what kind of classes we'll need when we start coding next sprint:

Before asking for peer feedback, I reviewed it myself first. I immediately saw the arrows were all wrong, so I changed the layout, added more attributes to the classes, and then submitted it for feedback:

After receiving Jamie's feedback, I made the mentioned changes and pushed the final version:

https://gitlab.fdmci.hva.nl/semester-3-hbo-ict/onderwijs/student-projecten/2025-2026/out-s-t-se/suuzaameebaa24/-/blob/main/docs/Diagrams/classDiagram3.0.png?ref_type=heads
