

Sprint 3 Increment

Docker

I started the sprint by installing Docker, which was quite challenging as it was very new to me. The installation process took a significant amount of my time.

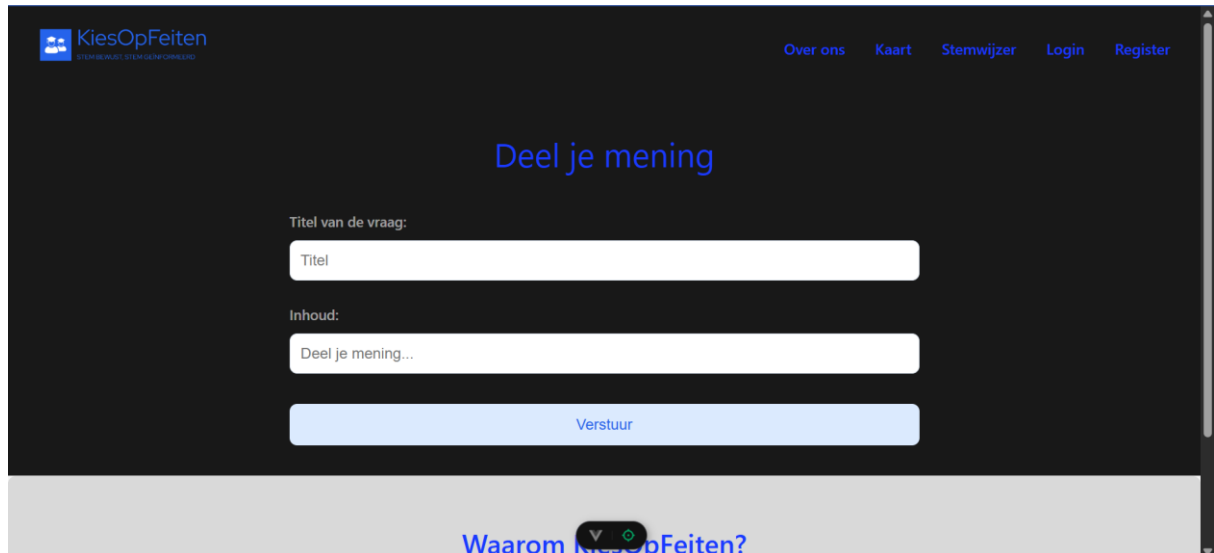

Updating the sitemap

I had a meeting with the Product Owner, who noticed that I had stored multiple versions of the sitemap in a folder. He preferred not to see this, so I updated the structure to keep only the latest version in the docs directory.

Name	Last commit	Last update
..		
📁 Increments	increments sprint 3 moved	1 hour ago
📁 documentatie	concepts are added	1 week ago
📁 .gitkeep	Add new directory	1 month ago
📁 Business_Model_Canvas.svg	SvgVersionOne	1 month ago
📁 Business_Model_Canvas_Version2.svg	Version 2, after Peer feedback.	1 month ago
📄 PO_gesprek.md	PO gesprek documentatie	1 month ago
📄 SiteMapKiesOpFeitenVersie2.png	Versie 2 Site map	1 month ago

Current issue

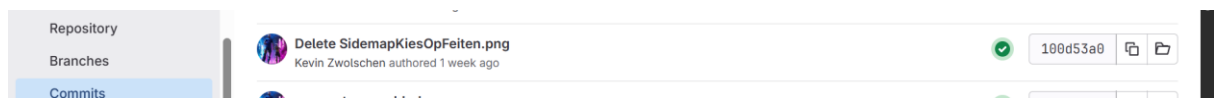

I am currently working on creating a form. This form allows users to input a topic for their question and describe the problem in detail. The submitted data will be sent to a database and also posted to the website so that people can discuss the topic.

The screenshot shows the KiesOpFeiten website interface. At the top left is the logo with the text 'KiesOpFeiten' and 'STEMMEND, STERK, STEVIG, STEVIG'. To the right are navigation links: 'Over ons', 'Kaart', 'Stemwijzer', 'Login', and 'Register'. The main heading is 'Deel je mening' in blue. Below it, there is a form with two input fields: 'Titel van de vraag:' with a placeholder 'Titel' and 'Inhoud:' with a placeholder 'Deel je mening...'. A blue 'Verstuur' button is at the bottom of the form. At the very bottom of the page, there is a link 'Waarom KiesOpFeiten?' with a small icon.

Version control

I received feedback from the Product Owner regarding version control. He was not pleased to see that I had uploaded all historical versions of files. I learned from this and deleted the old files, keeping only the most recent versions.

The next sprint

In the next sprint, my focus will be on the backend development for the form, specifically on connecting it to the database. I aim to learn more about Vue, as I find its approach to programming quite interesting.
